Venue

The Black Box is a multipurpose space which was originally created as a rehearsal space, but nowadays is fully equipped and up to technical standards to host suitable theatre productions. The space can be completely darkened, and is equipped with black backdrops which are hung from the walkway around the venue. The space has a dark concrete floor. Underneath the truss-framework which is hung from hoists, there's black marley.

The two emergency exits at the front and back of the space have to be clear at all times and legible.

There is no fixed tribune, but a mobile tribune is available if needed. DMX- and power-connections are fitted at the right side of the space (when facing the windows).

Stage

Multiple setups are possible regarding stage- and audience-placement, but the most common use of the space utilizes the marley floor as a 'stage, considering the truss-ceiling. There's a front lighting bridge above the 'audience-section'.

When used in this way, the 'stage' underneath the truss-framework is 12 meters wide and 10 meters deep considering the black backdrops on all sides. If these are hung to the side, the full space can be used, but is limited by some ventilation systems and technical cabinets.

Truss

The existing truss-framework hanging from electric hoists can be lowered and raised to a height of 5 meters. In between the framework, aluminum pipes can be hung to create a more elaborate framework to use more specific measurements for intricate stage plots. The WLL of these pipes are limited. It's always advised to communicate with our technical crew in advance when there's heavy loads involved.

There's one front bridge, on the opposite side of the truss-framework. This truss is 12 meters wide.

Electricity

The Black Box has some extra power supplies.

32A	1x stage right 1x stage left 1x at technical cabinets
125A	1x at technical cabinets (used for dimmers)

Audio

For recreational use or rehearsals, there's a stereo system hung at the four corners of the space, which consists of 4 Bose loudspeakers.

Dommelhof has a wide range of audio equipment. Various microphones, active or passive loudspeakers, analogue or digital mixing desks,... are available on request. In consultation with our technical coordinator and technical crew we will try to cater to your needs, taking into account the technical needs of other residencies and our own productions. Dommelhof consists of three fully equipped spaces and dozens of smaller multi-purpose rooms, so we cannot offer you a full and detailed inventory of our equipment.

We highly recommend communicating your technical needs relating audio well in advance with our technical coordinator.

Lighting

Number of dimmers: 24 DIM-circuits 2 kW (limited expansion possibilities)

The fixed lighting plot consists of:

Front 4x PC spot 1 kW
 4x Profile spot 1 kW

Dommelhof has a wide range of lighting equipment. Various fixtures, stage lights, dimmers,... are available on request. In consultation with our technical coordinator and technical crew we will try to cater to your needs, taking into account the technical needs of other residencies and our own productions. Dommelhof consists of three fully equipped spaces and dozens of smaller multi-purpose rooms, so we cannot offer you a full and detailed inventory of our equipment.

We highly recommend communicating your technical needs relating lighting well in advance with our technical coordinator.

Video

Dommelhof has a limited range of small beamers that can be used.

We highly recommend communicating your technical needs relating video well in advance with our technical coordinator.

Rigging

Dommelhof has a wide range of rigging equipment. In consultation with our technical coordinator and technical crew we will try to cater to your needs, taking into account the technical needs of other residencies and our own productions. Dommelhof consists of three fully equipped spaces and dozens of smaller multi-purpose rooms, so we cannot offer you a full and detailed inventory of our equipment. When using you own rigging equipment, we demand the required safety certificates.

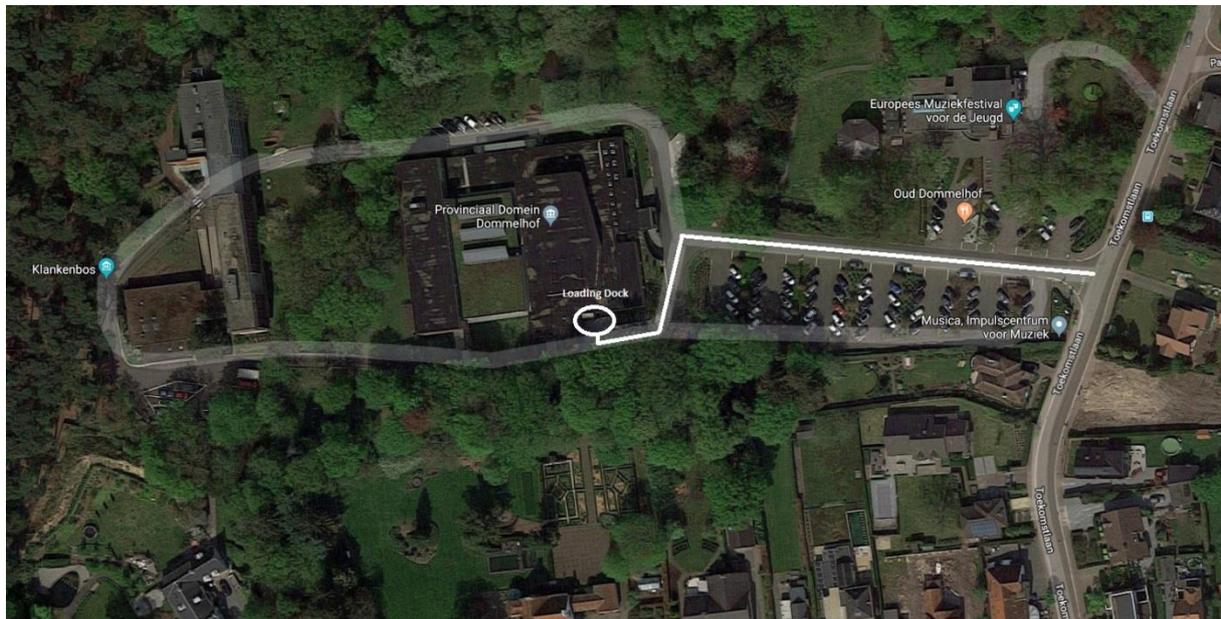

We highly recommend communicating your technical needs relating rigging well in advance with our technical coordinator.

Safety

Open fires and pyro are not allowed in the Black Box. The use of hazers or smoke machines has to be communicated in advance with our technical crew. All set pieces have to be fire retardant and have the required certificates.

Location

The loading dock can be accessed via the Toekomstlaan.
